The project does have a start script which is supposed to run a script called app.js .. no app.js script there .. did you copy paste that ? :)) The project does not contain the CRUD, I can see javascript files thrown everywhere in the project folders and there is an index2.js ? really ? where is the project ? :D ... You need to follow a specific project structure, I can see index.ejs which is not what we're teaching here at all and that sprint was asking for CRUD no front end yet ... You need to fix that as quickly as possible

I appreciate your will to build the project, but you need to work in order to make that wish come true, you need to keep improving the backend and at the same time build the frontend
